One Network Announces Disaster Management Network

Service Couples Execution Backbone with Existing Network for Rapid Recovery

Dallas, TX, USA – July 26, 2006 – One Network Enterprises, the pioneer of innovative solutions for Business Process Networks, today announced the Disaster Management Network, a new service that enables Humanitarian Aid Organizations, retailers and manufacturers to quickly respond to the needs of areas suffering from any type of disaster. The service leverages One Network's broad network-based logistics, real time load tracking, inventory management, replenishment, labor scheduling and collaboration capabilities. These services are currently being used by over 1,200 retailers, Department of Defense agencies, manufacturers and transportation providers.

The Disaster Management Network was jointly designed with input from several major retailers, manufacturers, carriers and US Federal Government agency personnel. The service is being launched with a major retailer who will be using the service during the current hurricane season in the United States. The Network enables companies to rapidly respond to radically altered demand, supply and logistics requirements caused by either internal or natural disaster events.

The Disaster Network is a global service which provides broad capabilities for complete, real-time enterprise visibility into supply and demand requirements, global load tracking and dynamic shipment rerouting. The Network will be tightly coupled with the company's widely used Finished Goods Network, enabling rapid on-boarding and delivering a secure platform for disaster recovery.

"As we have seen in recent years, natural disasters and internal problems can create severe disruptions to demand, supply and logistics execution," said John Keenan, CEO of One Network. "By coupling complete enterprise visibility with a powerful transaction backbone and connections to over 1,200 companies, we are unique in our ability to enable rapid recovery."

The Disaster Management Network is available immediately and is being delivered in a hosted environment by One Network. Customers pay a monthly fee for access to the Business Recovery

Applications, hosting services and rapid on-boarding plus transaction fees as the Disaster Network is utilized.

About One Network Enterprises, Inc.

One Network is the pioneer of next generation solutions for dynamic supply networks. The company delivers advanced, process-centric software architecture, robust supply network process templates and leading-edge mobile/RFID devices. The solution is delivered via an on-demand network, transforming slow moving, linear supply chains into responsive, adaptive supply networks. One Network is headquartered in Dallas, Texas and has offices in the United States and Europe. For more information, please call **+1 972-385-8630** or visit www.onenetwork.com.
