One Network Announces Acquisition of Valdero

Adds Advanced Analytical Functionality to Robust Supply Network Execution Solution

Dallas, TX – Sept. 20, 2005 – One Network Enterprises, Inc. today announced the acquisition of Valdero Corporation. Based in Silicon Valley and backed by premier venture capital firms, including Kleiner Perkins Caufield & Byers and Mohr Davidow Ventures, Valdero provides supply chain performance management and analytical collaboration applications. Terms of the transaction were not disclosed.

The Valdero product suite delivers advanced real-time analytics across multiple tiers of the supply network along with supply-demand match simulation capabilities, delivered through an intuitive web-based interface. Valdero's installed base has deployed these applications to reduce inventory exposure and shorten order cycle times. One Network will continue to support Valdero's existing products and customers and will tightly integrate their technology within One Network's transaction, process execution and optimization backbone.

The acquisition adds critical functionality to One Network's advanced solutions for managing the end-to-end execution of multi-enterprise supply network processes. "Valdero is a strategic technology acquisition for One Network, and is a natural step for us to take in converging traditionally separate planning and execution technologies," said John Keenan, CEO of One Network. "Moreover, the Valdero technology and team add key capabilities that will allow us to better serve our existing retail and CPG customers and expand into the high technology markets."

"Valdero focused on delivering high value, easy to deploy applications to the technology market that complement their existing investments in ERP and planning systems. This acquisition will allow One Network to offer a broad, integrated solution to help companies manage their real-time supply networks," said S. Singh Mecker, CEO of Valdero.

“Valdero combines great vision with superb technology to solve complex supply chain execution challenges. The combination with One Network’s technology for multi-enterprise transactional process management and on-demand delivery model will significantly increase the value to Valdero’s customer base,” said Ray Lane, General Partner with Kleiner Perkins Caufield & Byers.

About One Network Enterprises, Inc.

One Network is the pioneer of next generation solutions for dynamic supply networks. The company delivers an advanced process-centric software architecture, robust supply network process templates and leading-edge mobile/RFID devices. The solution is delivered via an on-demand network, transforming slow moving, linear supply chains into responsive, adaptive supply networks. One Network is headquartered in Dallas, Texas and has offices in the United States and Europe. For more information, please call **+1 972-385-8630** or visit www.onenetwork.com.
